C DECLARATION OF INCORPORATION OF PARTLY-COMPLETED MACHINERY

The undersigned
Maestri S.r.l.
Viale Piacenza, 31
43126 Parma - Italy

HEREBY STATES under its own responsibility, that the partly-completed machinery:
Description: **Machine for diesel oil transfer**
Model: **See the above models**
Serial number: refer to Lot Number shown on CE plate affixed to product
Year of manufacture: refer to the year of production shown on the CE plate affixed to the product.
Is intended to be incorporated in a machine (or to be with other machines)
so as to create a machine to which applies Machine Directive 2006/42/EC, may not be brought into service before the machine into which it is to be incorporated has been declared in conformity with the directive 2006/42/EC.
Is in conformity with the legal provisions indicated in the directives :
- Machine Directive 2006/42/EC
- Electromagnetic Compatibility Directive 2004/108/EC

To which the essential safety requirements have been applied and complied with what indicated on annex I of the machine directive applicable to the product and shown below: 1.13-1.15-1.31-1.32-1.33-1.34-1.37-1.38-1.41-1.42.1-1.51-1.52-1.54-1.55-1.58-1.59-1.511-1.513-1.515-1.61-1.63-1.64-1.71-1.72-1.73-1.74.

The documentation is at the disposal of the competent authority following motivated request at Maestri S.r.l. or following request sent to the e-mail address: maespr@tin.it

The person authorised to compile the technical file and draw up the declaration is
Bruno Maestri as legal representative.

Maestri Bruno
legal representative

Parma, 01/01/2012

D MACHINE DESCRIPTION

PUMP	Self-Priming, volumetric, rotating vane pump, equipped with by-pass valve.
MOTOR	Brush motor, DC, low tension with intermittent cycle, closed type in protection class IP55 according to CEI-EN 60034-5, directly flanged to the pump body.

D1 MOVING AND TRANSPORT

Due to the limited weight and dimensions of the pumps, special lifting equipment is not required to move them. The pumps are carefully packed before dispatch. Check the packing when receiving the material and store in a dry place.

E GENERAL WARNINGS

Important precautions
The following symbols will be used throughout the manual to highlight safety information and precautions of particular importance:
ATTENTION
This symbol indicates safe working practices for operators and/or potentially exposed persons.

WARNING
This symbol indicates that there is risk of damage to the equipment and/or its components.
NOTE
This symbol indicates useful information.

Manual preservation
This manual should be complete and legible throughout. It should remain available to end users and specialist installation and maintenance technicians for consultation at any time.

Reproduction rights
All reproduction rights are reserved by Maestri S.r.l. The text cannot be reproduced without the written permission of Maestri S.r.l.

THIS MANUAL IS THE PROPERTY OF MAESTRI S.r.l.
ANY REPRODUCTION, EVEN PARTIAL, IS FORBIDDEN.

F FIRST AID RULES

Contact with the product
In the event of problems developing following eye/skin contact, inhalation or ingestion of the treated product, please refer to the safety data sheet.

Persons who have suffered electric shock
Disconnect the power source, or use a dry insulator to protect yourself while you move the injured person away from any electrical conductor. Avoid touching the injured person with your bare hands until he is far away from any conductor. Immediately call for help from qualified and trained personnel. Do not operate switches with wet hands.

NOTE
Please refer to the safety data sheet for the product

SMOKING PROHIBITED
When operating the dispensing system and in particular during refuelling, do not smoke and do not use open flame.

G GENERAL SAFETY RULES

Essential protective equipment characteristics
Wear protective equipment that is: suited to the operations that need to be performed; resistant to cleaning products.

Personal protective equipment that must be worn
Wear the following personal protective equipment during handling and installation:

close-fitting clothing;

protective gloves;

safety goggles;

instruction manual

Protective equipment

Protective gloves

DANGER

Never touch the electric plug or socket with wet hands.

Do not switch the dispensing system on if the network connection cable or important parts of the apparatus are damaged, such as the inlet/outlet pipe, nozzle or safety devices. Replace the damaged pipe immediately.

Before each use, check that the network connection cable and power plug are not damaged. Have the network connection cable replaced immediately by a qualified electrician.

The electrical connection between the plug and socket must be kept well away from water.

Unsuitable extension leads can be dangerous. In accordance with current regulations, only extension cords that are labelled for outdoor use and have a sufficient conduction path should be used outdoors.

During operation a few parts may reach high temperatures and result in burns if touched

H TECHNICAL DATA

H1 PERFORMANCE SPECIFICATIONS
The performance diagram shows flow rate as a function of back pressure.

Functioning Point	Flow Rate	Voltage (V)	Typical Delivery Configuration			
			Absorption (A)	4 meters of 3/4" tube	802 Meter	Manual dispensing nozzle
A (Maximum Flow Rate)	50	12	15	.	.	.
B (High Flow Rate)	48	12	16	.	.	.
C (Rated Conditions)	46	24	8,5	.	.	.
D (By pass)	0	12	21	.	.	.
		24	12	.	.	.

ATTENTION
The curve refers to the following operating conditions:
Fluid: Diesel Fuel
Temperature: 20°C
Suction Conditions: The tube and the pump position relative to the fluid level is such that a pressure of 0.3 bar is generated at the nominal flow rate.
Under different suction conditions higher pressure values can be created that reduce the flow rate compared to the same back pressure values. To obtain the best performance, it is very important to reduce loss of suction pressure as much as possible by following these instructions:
• Shorten the suction tube as much as possible
• Avoid useless elbows or throttling in the tubes
• Keep the suction filter clean
• Use a tube with a diameter equal to, or greater than, indicated (see Installation)

I ELECTRICAL SPECIFICATIONS

PUMP MODEL	FUSES	ELECTRICAL POWER		CURRENT
		Current	Voltage (V)	Maximum(*) (A)
VERSION 12V	25	DC	12	22
VERSION 24V	15	DC	24	12

(*) referred to operations in by-pass mode

L OPERATING CONDITIONS

L1 ENVIRONMENTAL CONDITIONS

TEMPERATURE
min. -4 °F / max +140 °F
min. -20 °C / max +60 °C
max. 90%

RELATIVE HUMIDITY LIGHTING
The environment must conform to directive 89/654/EEC on work environments.
In case of non-EU countries, refer to directive EN ISO 12100-2:8.6.

ATTENTION
The temperature limits shown apply to the pump components and must be respected to avoid possible damage or malfunction.

L2 ELECTRICAL POWER SUPPLY

NOTE
N.B.: THE PUMP SHOULD BE POWERED BY A SAFE SOURCE: BATTERY OR POWER SUPPLY 12/24V WITH SAFETY TRANSFORMER.
In accordance with the model, the pump must be powered by a direct current line, the nominal values of which are indicated on the table in the paragraph "I" - ELECTRICAL SPECIFICATIONS.
The maximum acceptable variations from the electrical parameters are:
Voltage: +/- 10% of the nominal value

ATTENTION
Power supply from lines with values that do not fall within the indicated limits could cause damage to the electrical components and reduction of working performance.

L3 DUTY CYCLE

NOTE
The pumps have been designed for intermittent use and a 20-minute duty cycle under conditions of maximum back pressure.

ATTENTION
Functioning under by-pass conditions is only allowed for short periods of time (max. 3 minutes).

L4 FLUIDS PERMITTED / FLUIDS NOT PERMITTED

The decals present are as follows:

Products not permitted and related dangers	NOT PERMITTED	RELATED DANGERS
- GASOLINE - GASOLINE-INFLAMMABLE LIQUIDS - LIQUIDS WITH VISCOSITY > 20 cSt - WATER - FOOD LIQUIDS - CORROSIVE CHEMICAL PRODUCTS	- FIRE EXPLOSION - FIRE EXPLOSION - PUMP OXIDATION - CONTAMINATION OF THE SAME - PUMP CORROSION - INJURY TO PERSONS	- FIRE EXPLOSION - FIRE EXPLOSION - PUMP CORROSION - INJURY TO PERSONS - DAMAGE TO GASKET SEALS - MOTOR OVERLOAD
	- SOLVENTS	

M INSTALLATION

M1 PRELIMINARY INSPECTION

- Verify that all components are present. Request any missing parts from the manufacturer.
- Check that the machine has not suffered any damage during transport or storage.
- Carefully clean the suction and delivery inlets and outlets, removing any dust or other packaging material that may be present.
- Make sure that the motor shaft turns freely.
- Check that the electrical data corresponds to those indicated on the data plate.
- Always install in an illuminated area.
- Install the pump in ventilated place to avoid any vapours accumulation.
- We recommend that a suction filter be used

M2 POSITIONING THE PUMP

The pumps can be installed in any position (with pump axis in vertical or horizontal position).
The pump must be securely attached by means of the provided fixing bracket and fixing screws
THE MOTORS ARE NOT OF THE ANTI-EXPLOSIVE-TYPE. DO NOT install them where inflammable vapours could be present.
It is the responsibility of the installer to provide the necessary line accessories to ensure the correct and safe operation of the pump. The accessories that are not suitable to be used with the previously indicated material could damage the pump and/or cause injury to persons, as well as causing pollution.
To maximise performance and prevent damage that could affect pump operation, always demand original accessories.

M3 NOTES ON SUCTION AND DELIVERY LINES

DELIVERY
The selection of the pump model must be made taking into account the characteristics of the system.
The combination of the length of the pipe, the diameter of the pipe, the flow rate of the diesel or other liquid, as well as the accessories installed on the line, could create back pressure that are greater than the maximum predicted pressure, thereby causing the pump's electronic controls to intervene and reducing the dispensed flow considerably.
In these cases, to guarantee correct operation of the pump, it is necessary to reduce the resistance of the system using pipes that are shorter or that have a greater diameter, as well as line accessories with smaller resistances (e.g. an automatic dispensing nozzle with greater flow rate capacity).

SUCTION

The self-priming pumps have a good suction capability. During the start-up phase, when the suction pipe is empty and the pump is wet with the fluid, the electric pump unit is able to suck liquid from a maximum vertical distance of 2m. It is important to note that it could take up to 1 minute for the pump to prime and that the presence of an automatic dispensing nozzle on the delivery side will prevent the air trapped during the installation from being released and, therefore, the correct priming of the pump.
It is always advisable to prime the pump without an automatic delivery nozzle, verifying the proper wetting of the pump.

Always install a foot valve to prevent the suction pipe from being emptied and to keep the pump wet at all times. In this way, the pump will always start up immediately the next times it is used. When the system is in operation, the pump can operate with back pressures of up to 0.5 bars on the suction inlet beyond this point, the pump may begin to cavitate resulting in a drop of the flow rate and an increase in the noise levels of the system. In light of this, it is important to guarantee small back pressures on the suction side, by using short pipes with diameters that are equal to or larger than those recommended, reducing bends to a minimum, and using filters with a large cross-section and foot valves with minimum possible resistance on the suction side.
It is very important to keep the suction filter clean because, when they become clogged, they increase the resistance of the system.

The vertical distance between the pump and the fluid must be kept as short as possible, and it must fall within the 2m maximum required for priming. If the distance is greater, a foot valve must be installed to allow the suction pipes to fill up and the diameter pipes must be larger. It is however recommended that pump not be installed if the vertical distance is greater than 3m.

ATTENTION
If the suction tank is higher than the pump, an anti-siphon valve should be installed to prevent accidental product leaks. See the installation to contain the back pressures caused by water hammering.

It is a good system practice to immediately install vacuum and air pressure gauges at the inlets and outlets of the pump which allow verification that operating conditions are within anticipated limits. To anticipate limits, the suction pipes from being emptied when the pump stops, a foot valve should be installed.
It is the installer's responsibility to perform the electrical connections with respect for the applicable regulations.

M4 CONFIGURATION AND ACCESSORIES

NOTE
The wide range of accessories and the possibility to fit the base in different positions allow the pump to be used for different installations. The installation is stationary if the provided fixing bracket is used while it is mobile if the handle is used (if required)

M5 LINE ACCESSORIES

ATTENTION
It is the responsibility of the installer to provide the necessary line accessories to ensure the correct and safe operation of the pump. The accessories that are not suitable to be used with the indicated material could damage the pump or cause injury to persons, as well as causing pollution.
IT IS THE INSTALLER'S RESPONSIBILITY TO APPLY THE FOLLOWING SIGNALS ON THE MACHINE ANYWHERE PUMP WILL BE USED.

N CONNECTIONS

N1 ELECTRICAL CONNECTIONS
GENERAL WARNING
Comply with the following (not exhaustive) instructions to ensure a proper electrical connection:
1 Before installation and maintenance make sure that power supply to the electric lines has been turned off.
2 Use cables with minimum cross-sections, rated voltages and installation type that are suitable for the characteristics indicated in paragraph I ELECTRICAL SPECIFICATIONS.
3 Always close the cover of the terminal strip box before switching on the power supply, after having checked the integrity of the seal gaskets that ensure the IP55 protection grade.
For connection the installer shall have to use a cable of adequate diameter for the cable gland to ensure protection grade IP55.

ATTENTION
Cables with fasten connector coupling for connection to the power supply line
1 RED cable: positive pole (+)
2 BLACK cable: negative pole (-)
3 Terminal strip box (protection class IP55 in conformance with the directive EN 60034-5-97) complete of:
4A ON/OFF switch;
4B Safety fuse against short circuits and overcurrent, 25a fuse for 12v models
4C Safety fuse against short circuits and overcurrent, 15a fuse for 24v models
IT IS THE RESPONSIBILITY OF THE INSTALLER TO CARRY OUT THE ELECTRICAL CONNECTIONS IN COMPLIANCE WITH THE APPLICABLE REGULATIONS. DO NOT INVERT FUSES TO AVOID ANY MOTOR DAMAGE OR MALFUNCTION.
25A FUSE CAN BE FITTED ONLY ON 12V PUMP
15A FUSE CAN BE FITTED ONLY ON 24V PUMP

N2 CONNECTING THE PIPING

FOREWORD
1 Before any connections, please refer to the indications (sticker on the pump) to detect suction and delivery univocally.
2 Before connecting, make sure that the pipes and the suction tank are free of dirt and thread residue, which could damage the pump and accessories.
3 Before connecting, make sure that the pipes and the suction tank are free of dirt and thread residue, which could damage the pump and accessories.
4 Do not use conical threaded fittings, which could damage the threaded inlet or outlet openings of the pumps if excessively tightened.
5 If not already fitted, fit a suction filter.
recommended minimum nominal diameter: 3/4" nominal recommended pressure: 10 bar
use pipes that are suitable for operation with back pressure recommended minimum nominal diameter: 3/4" nominal recommended pressure: 10 bar
The provided tubes have a resistivity of <1 MOhm, as specified by the EN 13617-1 standard. All the installed tubes that are different from those supplied, must have the above mentioned characteristics. When the connections are completed, the installer should check that the resistivity of the assembly complies with the EN 13617 and EN 13612 standards.
The use of tubes that are not suitable could cause damage to the pump or to persons, as well as pollution. Loosening of the connections (threaded connections, flanges, gasket seals) could cause serious ecological and safety problems. Check all the connections after the first installation on a daily basis. If necessary, tighten all the connections.

O INITIAL START-UP

GETTING STARTED
1 Check that the quantity of diesel fuel in the suction tank is greater than the amount you wish to transfer.
2 Make sure that the residual capacity of the delivery tank is greater than the quantity you wish to transfer.
3 Do not run the pump dry. This can cause serious damage to its components.
4 Make sure that the tubing and line accessories are in good condition. Diesel fuel leaks can damage objects and injure persons.
5 Do not operate switches with wet hands.
Extreme operating conditions with working cycles longer than 30 minutes can cause the motor temperature to rise, thus damaging the motor itself. Each 30-minute working cycle should always be followed by a 30-minute power-off cooling phase.
In the priming phase the pump must blow the air initially present in the entire installation out of the delivery line. Therefore it is necessary to keep the outlet open to permit the evacuation of the air.
If an automatic type dispensing nozzle is installed at the end of the delivery line, the evacuation of the air will be difficult because of the automatic stopping device that keeps the valve closed when the line pressure is too low. It is recommended that the automatic dispensing nozzle be temporarily disconnected during the initial start-up phase.
The priming phase can last from several seconds to a few minutes, as a function of the characteristics of the system. If this phase is prolonged, stop the pump and verify:
That the pump is not running completely dry
That the suction tubing is not allowing air to seep in
That the suction filter is not clogged
That the suction height does not exceed 2 m. (if the height exceeds 2 m, fill the suction hose with fluid)
That the delivery tube is allowing the evacuation of the air.

PRIMING
When priming has occurred, verify that the pump is operating within the anticipated range, in particular:
That under conditions of maximum back pressure, the power absorption of the motor stays within the values shown on the identification plate
That the suction pressure is not greater than 0.5 bar
That the back pressure in the delivery line is not greater than the maximum back pressure foreseen for the pump.

P DAILY USE

FOREWORD
This pump is for professional use only.
USE PROCEDURE
1 If using flexible tubing, attach the ends of the tubing to the tanks. In the absence of an appropriate slot, solidly grasp the delivery tube before beginning dispensing.
2 Before starting the pump make sure that the delivery valve is closed (dispensing nozzle or line valve).
3 Turn the ON/OFF switch on. The by-pass valve allows functioning with delivery closed only for brief periods.
4 Open the delivery valve, solidly grasping the end of the tubing.
5 While dispensing, do not inhale the pumped product.
6 Should you spill any fluid while dispensing, bank it with earth or sand to absorb it and limit its spreading.
7 Close the delivery valve to stop dispensing. When dispensing is finished, turn off the pump.
ATTENTION
After use, make sure the pump is turned off
In case of a power break, switch the pump off straight away.

Q MAINTENANCE

NOTE
Maintenance must be performed only by authorized and properly trained personnel.

SAFETY WARNINGS

Thanks to the design, the pump requires simple maintenance. Before carrying out any maintenance work, disconnect the pump from any electrical and hydraulic power source. During maintenance, the use of personal protective equipment (PPE) is compulsory. In any case always bear in mind the following basic recommendations for a good functioning of the pump.

ONCE A WEEK:
Check that the pipe connections are not loose to prevent any leaks

Check and keep the filter installed on the suction line clean

Check the pump body and keep it clean and free of any impurities

Check that the electrical supply cables are in good condition

Do not put your fingers into the pump openings while the pump is working

R NOISE LEVEL

NOTE
Under normal working conditions the noise emission from all models does not exceed the value of 70 db at a distance of 1 meter from the electric pump.

S PROBLEMS AND SOLUTIONS

For any problems contact the authorised dealer nearest to you.

PROBLEM	POSSIBLE CAUSE	CORRECTIVE ACTION
THE MOTOR IS NOT TURNING	Lack of electric power	Check the electrical connections and the safety systems.
	Rotor jammed	Check for possible damage or obstruction of the rotating components.
THE MOTOR TURNS SLOWLY WHEN STARTING	Motor problems	Contact the Service Department
	Low voltage in the electric power line	Bring the voltage back within the anticipated limits.
LOW OR NO FLOW RATE	Low level in the suction tank	Refill the tank
	Foot valve blocked	Clean and/or replace the valve
INCREASED PUMP NOISE	Filter clogged	Clean the filter
	Excessive suction pressure	Lower the pump with respect to the level of the tank or increase the cross-section of the tubing
LEAKAGE FROM THE PUMP BODY	High loss of head in the delivery circuit (working with the by-pass open)	Use shorter tubing or of greater diameter
	By-pass valve blocked	Dismantle the valve, clean and/or replace it
T DEMOLITION AND DISPOSAL	Air entering the pump or the suction tubing	Check the seals of the connections
	A narrowing in the suction tubing	Use tubing suitable for working under suction
DISPOSAL OF PACKING MATERIALS	Low rotation speed	Check the voltage at the pump. Adjust the voltage and/or use cables of greater cross-section
	The suction tubing is resting on the bottom of the tank	Raise the tubing
DISPOSAL OF METAL PARTS	Cavitation occurring	Reduce suction pressure
	Irregular functioning of the by-pass	Dispense fuel until the air is purged from the by-pass system
DISPOSAL OF ELECTRIC AND ELECTRONIC COMPONENTS	Air present in the diesel fuel	Verify the suction connection
	Seal damaged	Check and replace the seal

T DEMOLITION AND DISPOSAL

Foreword
If the system needs to be disposed, the parts which make it up must be delivered to companies that specialize in the recycling and disposal of industrial waste and, in particular:
The packaging consists of biodegradable cardboard which can be delivered to companies for normal recycling of cellulose.

Disposal of packing materials
Metal parts, whether paint-finished or in stainless steel, can be consigned to scrap metal collectors.
These must be disposed of by companies that specialize in the disposal of electronic components, in accordance with the indications of directive 2002/96/CE (see text of directive below).

Disposal of electric and electronic components
European Directive 2002/96/EC requires that all equipment marked with this symbol on the product and/or packaging must be disposed of together with non-differentiated urban waste. The symbol indicates that this product must not be disposed of together with normal household waste. It is the responsibility of the owner to dispose of these products as well as other electric or electronic equipment by means of the specific refuse collection structures indicated by the government or the local governing authorities.

Information regarding the environment for clients residing within the European Union
Disposal of miscellaneous parts
Other components, such as pipes, rubber gaskets, plastic parts and wires, must be disposed of by companies specialising in the disposal of industrial waste.
